2.3) Engineering Methods

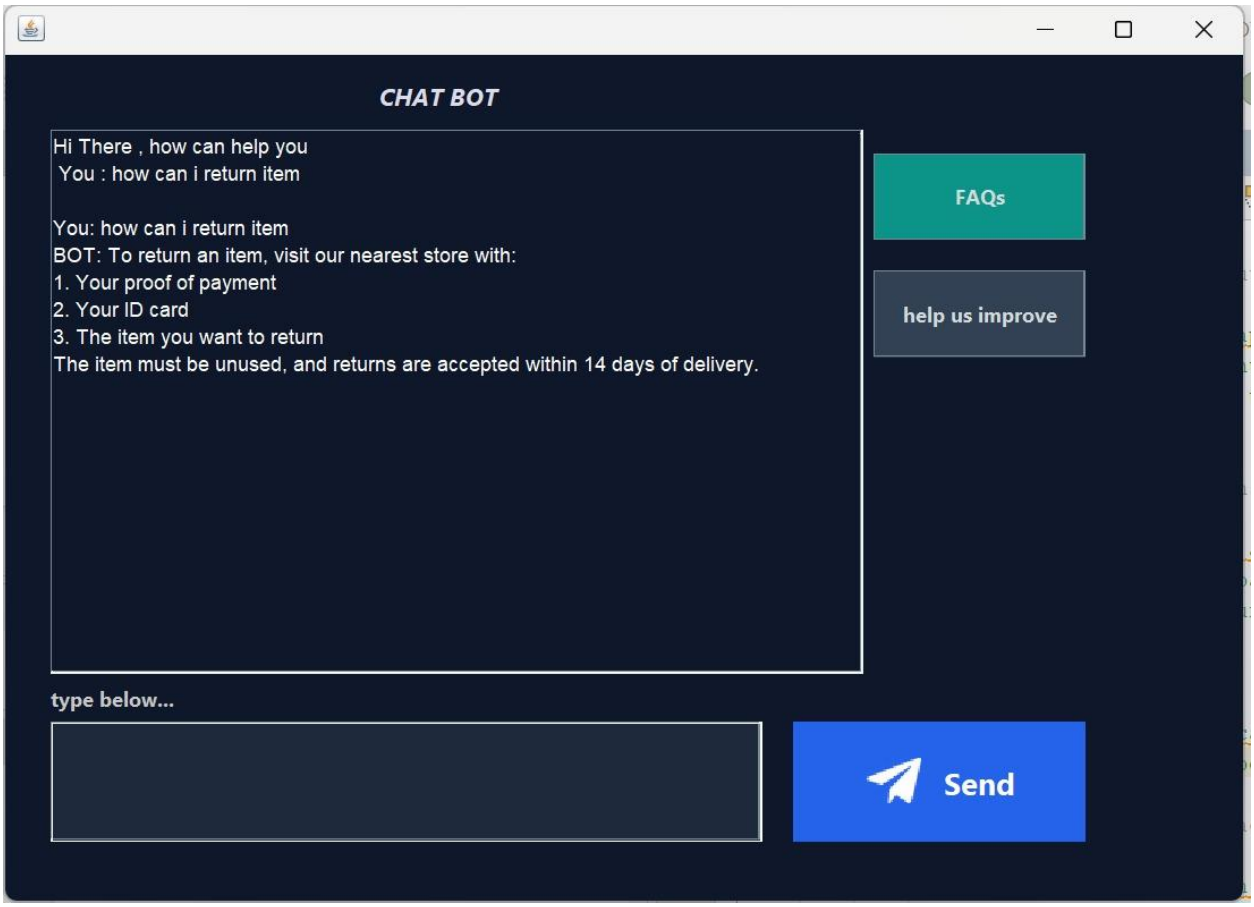

We followed the repeated cycle of breaking down , designing , implementing and testing. From the project quideline we looked what our code have to do and we added some features such as the Frequently Asked Questions (FAQs) , product search , order tracking and a way of helping peaple / humans in our bot. Afterv we added these features we then wrote the pseudocode to clearly show how our functionability and created UML diagram. We did this project using NetBeans to create GUI form and classes required.

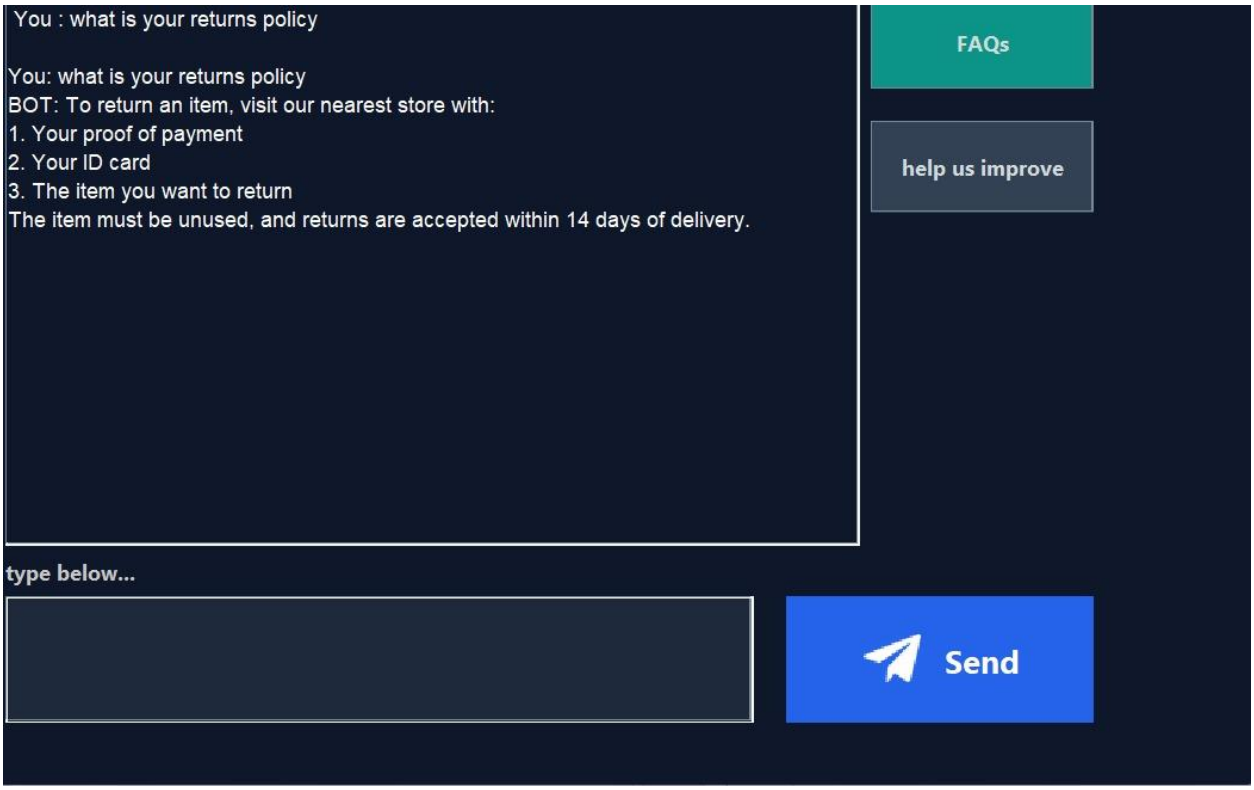

4) Results& Analysis

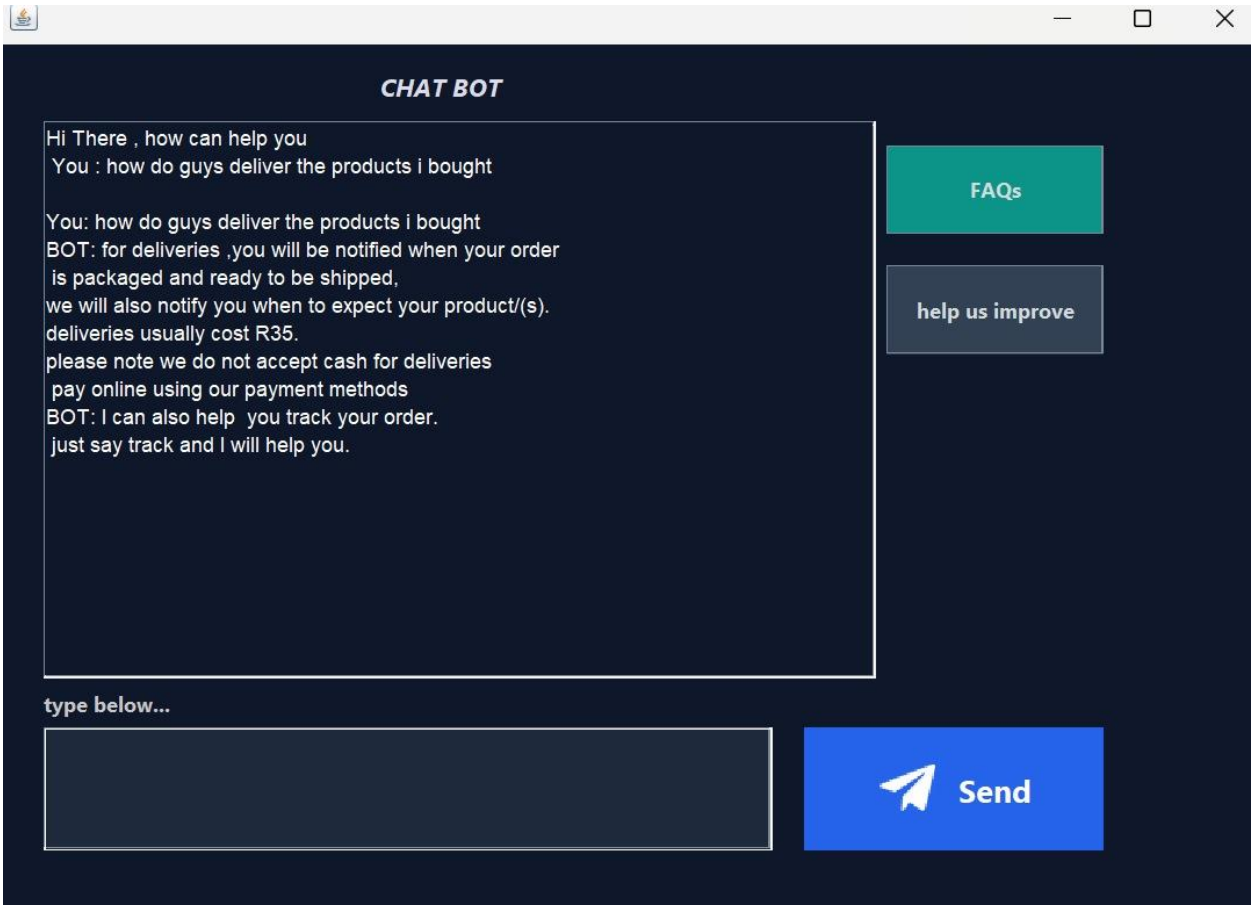

4.1) We compiled the code and these pictures shows the representative test cases
